

Fostex FR-2LE

Neuerung in V1-30

1. With the V1.30 software, you have a choice of the remote controller functions. One selection is "MRK (MARK)

: REC (RECORD) : STB (STANDBY)" and the other "STP (STOP) : PLY (PLAY) : STB (STANDBY)". By

entering a newly added "Remote" SETUP menu, you can choose one or the other.

2. Depending on a microphone connected to FR-2LE, there is a case that an appropriate recording level cannot be

set even when fully turning up the MIC TRIM and the Recording Level Controls. In order to use a microphone

with low sensitivity, we have added the new settings to the ALC (Auto Level Control) SETUP menu on the

V1.30 software. If your customers use such a microphone, please ask them to make either the "OFF+12dB" or

"LIM+12dB" setting to increase the gain.

NOTE: Since a new menu and settings have been added on the V1.30 software, we encourage you to execute

the "Initial Setup" after updating the software and cycling the power
